

Ahmed Alnono

Full Stack Developer | .NET & React

ahmed.alnono.work@gmail.com | +972-59-251-1825 | Palestinian Authority | [linkedin.com/in/ahmedalnono-187b09251](https://www.linkedin.com/in/ahmedalnono-187b09251) | <https://github.com/ahmedAlnono> | <https://ahmedAlnono.github.io/portfolio>

PROFESSIONAL SUMMARY

Full Stack Developer with 6 years of programming experience and 3 years of professional experience with .NET, specializing in building scalable web applications using ASP.NET Core, React, and PostgreSQL. Experienced in designing and developing complete applications from architecture and UI development to backend APIs, database design, deployment, and production operations.

Strong hands-on experience with React, TypeScript, ASP.NET Core Web API, Entity Framework Core, PostgreSQL, REST APIs, authentication and authorization, JWT, role-based permissions, background jobs, notifications, file management, caching, and third-party integrations including WhatsApp. Experienced in applying Clean Architecture, CQRS, SOLID principles, Repository Pattern, dependency injection, modular architecture, and database optimization.

Built and independently delivered production-grade projects, including a multi-branch restaurant platform serving thousands of users daily with subscription management, notifications, and WhatsApp integration, as well as a 3D interior design platform featuring interactive room and furniture customization. Comfortable working across the full development lifecycle, including Linux, Docker, Nginx, VPS deployment, Git/GitHub, CI/CD, SSL, and domain configuration.

Currently focused on Full Stack Developer roles combining .NET and React, with a strong emphasis on backend architecture, scalable APIs, and reliable production systems.

WORK EXPERIENCE

Back End Developer — Avatar Information Technology May 2026 – Present | Palestinian Authority

- Built complete enterprise backend system for Palloncino Party Management handling orders, inventory, tasks, and delivery operations
- Implemented multi-role authentication (Customer, Employee, Designer, Driver, Admin) with JWT refresh tokens
- Developed automated job order generation from customer approvals and task management with sub-tasks, checklists, and photo proof uploads
- Designed inventory system with stock tracking and low-stock alerts; developed quotation module with PDF export
- Added push notifications via Firebase Cloud Messaging and containerized application using Docker
- Reduced order processing time by 60% and eliminated manual tracking errors for 100+ monthly orders
- Tech Stack: .NET 10, C#, Entity Framework Core, SQLite, JWT, AutoMapper, Docker

Full Stack Engineer — Qawam Diet June 2026 – June 2026 | Remote

- Designed and developed the Qawam Diet web platform end-to-end, covering UI/UX, frontend, backend, database, deployment, and production operations
- Built the backend using ASP.NET Core Web API with PostgreSQL and Entity Framework Core; developed the frontend using React and TypeScript with a modular component architecture
- Designed and implemented the restaurant's monthly subscription management system from the ground up
- Implemented authentication, authorization, JWT-based security, role and permission management, RESTful APIs, notifications, background processes, file management, caching, and database transactions
- Integrated WhatsApp to support both sending and receiving messages between the platform and customers
- Applied Clean Architecture, CQRS, SOLID principles, Repository Pattern, and Dependency Injection throughout the application
- Managed the complete production environment including Linux, Docker, Nginx, VPS deployment, SSL, domain configuration, Git/GitHub, and CI/CD
- Developed and maintained the platform as a production system serving thousands of users daily across multiple restaurant branches

- Independently designed and developed a full-stack 3D interior design platform from concept to production
- Built the frontend using React, TypeScript, React Query, Zustand, React Router, Tailwind CSS, and Vite
- Developed an interactive 3D environment allowing users to create rooms, add and manipulate furniture, move and rotate objects, and customize materials and colors
- Implemented functionality for users to save, manage, and export their completed interior designs
- Developed the backend using ASP.NET Core Web API with Clean Architecture, CQRS, SOLID, Repository Pattern, and Dependency Injection
- Designed and managed the PostgreSQL database including relationships, complex queries, indexes, transactions, and optimization
- Worked extensively with 3D assets, GLB models, and textures, applying optimization techniques to improve loading times and performance
- Built reusable React components using a scalable, component-based architecture; implemented RESTful APIs, authentication, pagination, and caching
- Managed the complete deployment and production environment using Linux, Docker, Nginx, VPS, Git/GitHub, CI/CD, SSL, and domain configuration
- Took full ownership of the project across design, architecture, development, database engineering, 3D integration, deployment, and maintenance

Back End Developer — Dash

February 2022 – September 2023 | Palestinian Authority

- Designed and built large-scale, high-performance APIs using NestJS
- Developed scalable and maintainable server-side architectures handling high traffic and complex business logic
- Participated in code reviews, system design discussions, and agile development processes
- Contributed to improving code quality, optimizing performance, and implementing security best practices

EDUCATION**B.Sc. Software Engineering**

2022

Al-Azhar University – Gaza | Gaza, Palestine

Relevant coursework: Data Structures, Algorithms, Software Architecture, Databases, Operating Systems

SKILLS**Technical:** React, .NET 10, C#, Node.js, NestJS, PostgreSQL, SQLite, Entity Framework Core, REST API, JWT, AutoMapper, Docker, Firebase Cloud Messaging, Clean Architecture**Soft Skills:** Problem Solving, System Design, Client Communication, Agile Development, Code Review, Deadline Management**Languages:** Arabic (Native), English (Professional)**PROJECTS****Palloncino Party Management System** | .NET 10, C#, Entity Framework Core, SQLite, JWT, Docker, Firebase

Enterprise backend system for a party planning company managing orders, inventory, tasks, and delivery workflows.

- Multi-role auth system with JWT refresh tokens
- Automated job order generation, task management with sub-tasks and photo uploads
- Inventory tracking with low-stock alerts and PDF quotation export
- Reduced order processing time by 60% for 100+ monthly orders

<https://github.com/ahmedAlnono/PalloncinoApi>**Online Chess Game** | Asp.Net Core | Postgresql | Redis | SignalR | React | zustand | Framer Motion

Built a real-time online chess platform where players can compete instantly with live move synchronization, matchmaking, game rooms, timers, and responsive cross-device gameplay. Focused on scalable backend architecture, smooth user experience, and low-latency WebSocket communication.

Skills: .NET Core · .NET Framework · Arch Linux · C# · CSS · Databases · Figma · Front-End Development · Full-Stack Development · Git · HTML5 · JavaScript · Linux System Administration · PostgreSQL · Project Management · React.js · Relational Databases · Security · Server Side · Software Development · Software as a Service (SaaS) · Testing · Typescript · Webpack

University Management System | *Asp.Net Core* | *Postgresql* | *Redis* |

comprehensive, enterprise-grade educational management platform similar to Moodle but built with modern technologies. It handles all academic and administrative operations of a university in one unified system.
